## Preface

## Foreword

### Chapitre 1 – Long cycles and the asset markets

1. Kondratiev: father of the supercycle
  - 1.1. The first “law” pertains to inventions
  - 1.2. The second “law” concerns social movements, revolutions and wars
  - 1.3. The third “law” refers to the overlapping of long and short cycles
  - 1.4. The fourth “law” relates to deflation of agricultural prices during downward phases
2. Breakdown of major cycles into four phases: the example of the United States
  - 2.1. Long cycle observations based on financial data
  - 2.2. These “seasons” also reflect an economic reality
  - 2.3. Clarifications on some key variables
3. Major international cycles
  - 3.1. Review of ten countries presenting basically very different features
  - 3.2. Distinctive behavioural features of these countries
4. The key role of the demographic factor
  - 4.1. Population trends in the principal developed countries
  - 4.2. Growth in the economically active population
  - 4.3. Generational impact on the main asset classes
  - 4.4. Productivity gains
  - 4.5. Positioning of developed and emerging countries based on these criteria
5. Consequences on geopolitics and our growth model
  - 5.1. By sheer virtue of its size, China is destined for leadership
  - 5.2. The size of the global capitalist economy is changing
6. Conclusion

### Chapitre 2 – The short investment cycle: our roadmap

1. The four phases of the investment cycle
  - 1.1. Phase i
  - 1.2. Phase ii
  - 1.3. Phase iii
  - 1.4. Phase iv
  - 1.5. Conclusion on target strategies
2. The duration of short investment cycles
  - 2.1. The duration of economic cycles
  - 2.2. The duration of “stock market” cycles
  - 2.3. Comparison between stock market cycle and economic cycle
3. Monetary policy, the first pillar of the investment cycle
  - 3.1. From monetary targeting to inflation targeting
  - 3.2. The main tools of monetary policy
  - 3.3. How communication became an indispensable tool
  - 3.4. The influence of exchange rates

4. Influence of long cycles on short cycles
  - 4.1. The evolution of US key interest rates since the creation of the Fed
  - 4.2. The influence of monetary policy on the asset markets
  - 4.3. Performance of the equity market in terms of short and long cycles
5. The most recent short cycles perfectly illustrate this logic
6. Conclusion

### Chapitre 3 – Cycles and asset allocation: key investment decisions

1. Strategic allocation: the case of the US
  - 1.1. Summarising key historical observations about asset classes during long cycles
  - 1.2. Establishing target financial portfolios for each season
  - 1.3. The unique case of gold
  - 1.4. Positioning of our target strategic allocation of financial assets in relation to the range of possible portfolios
  - 1.5. Establishing target portfolios that include real estate
  - 1.6. Positioning of our target strategic allocation with real estate in relation to the range of possible portfolios
  - 1.7. Performance of the selected strategic portfolio
2. Strategic allocation: the case of France, the UK and Japan
  - 2.1. France
  - 2.2. United Kingdom
  - 2.3. Japan
3. Tactical allocation by short cycle and economic season
  - 3.1. Target weights and results
  - 3.2. Managing the transition between economic seasons
4. Conclusion

### General Conclusion

### Bibliography
